Coin Quest 3D — Game Design Document

Magzhan Kydyrbai · Game Development Fundamentals · Narxoz University · RK2, weeks 9–13

1. Title + pitch. *Coin Quest 3D* — run, jump and shoot through three dangerous levels, collect every coin to open the gate, and defeat the fire boss.

2. Genre · platform. 3D action platformer · Android and iOS phones and tablets · **landscape**.

3. 2D or 3D. 3D. The hero is a rigged Mixamo character with Idle, Run and Jump animations (Animator with Speed / Grounded parameters).

4. Core loop. Run → **Collect coins** → **Dodge / Shoot enemies** → **Open the gate** → next level (harder) → run…

5. Controls (on-screen).

Button	Place	What it does
Joystick	bottom-left	move the hero relative to the camera
JUMP	bottom-right	jump (only on the ground)
FIRE	bottom-right	shoot forward; hold for auto fire
II (Pause)	top-right	pause: Resume / Restart / Menu, time stops

6. Content. 3 levels + boss: Level 1 (tutorial: coins, gate, exit), Level 2 (corridor: holes, spinning blades, falling rocks, patrol enemies), Level 3 (boss with 15 HP: fireballs, bombs from the sky, 2 phases). Items: coins (score, open the gate), hearts (+1 life, max 5). Enemies: patrol enemy, spinning blade, falling rock, bomb, boss.

7. Art and sound. Bright, simple low-poly look: Unity primitives with flat colour materials, one Mixamo hero, rounded orange/green/blue UI buttons with gold titles — one world, one style. Sounds and music: Pixabay (coin, game start, explosion, bonus, arcade music loop).

8. MVP (week-15 build). Main Menu, HUD and Pause working on all phones (safe area); 3 levels + Win screen; hearts and score; patrol enemy with simple AI; saving of best score and unlocked levels; sound and music with volume; basic effects (coin sparkle, hit flash); Android build.

9. Cut list (NOT making). Online multiplayer · shop and in-app purchases · character customisation · more than 3 levels · cutscenes · procedural levels · achievements / leaderboards.

10. Plan (weeks 9–13).

Week	Ready
9	GDD, GitHub repo, Main Menu / HUD / Pause, safe area, Device Simulator tests
10	Enemy AI: patrol → chase → attack (NavMesh)
11	Saving: best score, unlocked levels, settings (PlayerPrefs / JSON)
12	Sound: music, SFX, volume sliders, audio mixer
13	Effects and polish: particles, camera shake, Android build test on a phone

Roles. Solo until week 14: Magzhan Kydyrbai — design, programming, level building, UI, sound, testing. Teams for the final project form in week 14.
